RNC Delivering Republican Losses In New Jersey, North Carolina and Virginia

Republicans are about to learn who controls the strings of the voter apparatus

Repubs are about to get smoked in **Virginia** with a candidate who does not connect - against another candidate who connects even less.

Nobody cares about stupid texts some knucklehead sent years ago - but that's her pitch - which is not much on which to campaign.

North Carolina Senate and New Jersey Governor are going to be Repub disappointments for different reasons.

Republicans continually refuse to compare voter rolls with the property tax rolls - stopping mail-in ballots going to Walmarts, strip malls and closed gas stations.

There the ballots accumulate - are gathered by NGOs - often in conjunction with the Postal Service - and are voted for the Leftist.

Mail-in ballots, from ineligible addresses, delivered by NGOs - will make the difference if needed.

In New Jersey and North Carolina, there are over 150,000 ballot/address combos - in each state - ineligible- but each can receive mail-in ballots.

So if it's close, the Left has a lot of ammo to use.

In both states useless voter integrity orgs spent the last 4 years, and lots of money - cleaning voter rolls of those **WHO DO NOT VOTE.**

Citizens are about to learn removing voters who do not vote - and do not have ballots cast in their name - is like taking water from one end of the pool and pouring it in the other end.

This is the election - Repubs in particular - learn the bullshit about voter ID and “cleaning voter rolls” of VOTERS WHO DO NOT VOTE - are completely useless efforts **when ineligible addresses collect over 100,000 votable ballots - controlled by NGOs.**

Talking about NGOs - in Virginia, North Carolina and New Jersey - the RNC and the Republican candidates are completely clueless about NGOs operating - TODAY - some with foreign money, some with educational money - which cannot be used for campaigns - to stop the Republican.

Those NGOs - today - are building get-out-the-vote entities and ballot harvesting ops - and the Repubs do not even know their names.

Want to see how to trace that dough? Here’s a video:

You aren’t hearing this from the RNC.

They do not have any modern tools - even though they spend tens of millions of dollars on obsolete technology.

In North Carolina and NJ, the Repubs will learn three lessons entirely missed in 2024.

1. **Lefties control the election apparatus.**

Election apparatus is controlled by Lefties in both New Jersey and North Carolina.

In each state, there are over 150,000 ineligible ballot/voter combos set to receive a mail-in ballot which can be collected by NGOs and voted - for the Leftist.

The candidates have zero visibility to this - because the election apparatus is run by the pros - the Left - as it has been for decades.

So Republicans invest in stuff that does not work - like having Scott Presler - a grifter if there ever was one - hold rallies to register low propensity voters.

Nobody seems to want to watch the endless videos about how the Presler work in Pennsylvania turned out to be complete BS.

Thus, Republicans spend money on what does NOT work - and in the end, LOSE.

2. **Trump is a 2024 phenom - and if he ain’t on the ballot, the physics change.**

You can write off the low to mid propensity Repub voters - they aren’t going to show up, and that eliminates or certainly reduces any chance for a GOP win.

Starting around the second loss, the current giddy madness infesting MAGA types - that the Left is on its ass because nobody is registering as a Dem will turn into **"....how did they manage 3 wins?"**

Well, it's because the Left never took its hands off the election apparatus - so voter registration does not matter much if you can manufacture ballots through NGOs.

3. **RNC has the most corrupt, useless election integrity apparatus**

In North Carolina it's a karma thing since the Repub - Whatley - is the one who bought the 2024 crap from the national voter integrity orgs that the real election interference was illegal aliens showing up to vote.

He is the useless guy who paid to have 200,000 volunteers trained to "poll watch" at the very time 4 senate races - Nevada, Arizona, Michigan and Wisconsin - were lost to mail-in ballots flooding in from Walmarts - under the very eyes of those poll watchers.

Whatley is the guy who went with **RNC Data** - who produce voter rolls provably wildly incorrect - costing Repubs election losses in close races.

RNC Data - uses the same data today they used to cause Kari Lake to get smoked in ARIZONA.

Had Lake hired the local community college database team to monitor the Maricopa voter rolls - doing a couple of comparisons - she would be a Senator today instead of cooling her 4 inch stiletto heels in a no name gig.

None of this applies yet in Virginia as the Republican candidate is doing about all one can do to not connect - so the Lefties may not need those 150,000-plus anomaly voter/address combos for mail-in margins.

You will have ringside seats to three elections Republicans could have won, and in at least two, three if they need to, the NGOs will deliver the election margins - with cast mail-in ballots, from ineligible addresses - to make the difference.

The only silver lining is the guy who personally made the call that cost the Republicans 4 U.S. Senate seats in 2024 - Whatley - gets to reap what he sowed.

Welcome to reality.
